Mini Fact:
Weather
forecasters
use math to
predict what
the day will
be like.

Math is everywhere in our world. You use it every day, and you're probably better at math than you think you are.
Let's explore some examples of how we use math in our everyday lives.

Shopping math

Shopping is packed with math. We use it to figure out:

- what size to buy
- if we can afford it
- how many things we need
- how much a sale item really costs.

Can you figure out how to solve these math problems?
You are helping your dad shop for a party, and you are in charge of getting the hot dogs and buns. There are 12 hot dogs in each package. But there are only 8 buns in a package.

- If you want to serve 24 hot dogs, how many packages of them will you need?
- How many packages of buns do you estimate, or guess, that you'll need?
- What if 30 people are coming to the party? How many packages of hot dogs will you need? How many packages of buns will you need?

Fraction fun

Fractions are a way to talk about a part of something. For example, say you have a birthday cake. Your mom has divided it into four equal pieces. Since it is your birthday, your mom gives you two pieces.
You could say that you got two pieces of cake. Or you could say that you got 2/4 (two-fourths) of the cake. This means you got two of the four pieces. This is the same thing as saying you got 1/2 of the cake.

- If your brother got 1/4 of the cake, how many pieces did he get?

Cracking the fraction code

The bottom number of a fraction tells you how many equal pieces there are in the whole thing. The top number tells you how many pieces of the whole you are thinking about.
You got two-fourths of the cake. The bottom number tells you there were four equal pieces. The top number tells you that you got two of those four pieces.
We know that 2 is half of 4, and 1 is half of 2. You got two pieces of the cake — you got 1/2 of the cake.

$$\frac{2}{4} = \frac{1}{2}$$

Be a math spy

Look at the back of a \$1 bill.

- How many arrows is the eagle holding?
- How many steps are on the pyramid?
- How many leaves are on the olive branch?

When you've counted these items, ask yourself why the dollar designers chose these numbers. What do they have to do with our country?

Cooking the numbers

We use math every time we cook. We use it to measure ingredients, figure out how long it will take to make something and to cook it, and how healthy it is.

Answers:

Shopping math answers: If you want to serve 24 people, you need to buy 2 packages of hot dogs (2 x 12 = 24), and 3 packages of buns (3 x 8 = 24). If you want to serve 30 people, you need to buy 3 packages of hot dogs, and you will have 6 hot dogs left over (3 x 12 = 36). You will need to buy 4 packages of buns, and you will have 2 buns left over (4 x 8 = 32).
Fraction fun answer: Your brother got one of the four pieces.
\$1 bill answer: There are 13 arrows, 13 steps and 13 leaves on the olive branch. The number 13 represents the 13 original American Colonies.

Try 'n' Find

Words that remind us of math are hidden in this puzzle. Some words are hidden backward or diagonally, and some letters are used twice. See if you can find:

AFFORD, COOKING, COST, COUNT, DIVIDE, EQUAL, ESTIMATE, FRACTION, FUN, MATH, MEASURE, NUMBERS, PARTS, PREDICT, PROBLEM, SALE, SHOPPING, SIZE, WHOLE.

Cook's Corner

Cherry Cheesecake Pops

You'll need:

- 1 (16-ounce) can cherry pie filling
- 8 ounces light cream cheese, softened
- 2 tablespoons confectioners' sugar
- 1 teaspoon vanilla extract

What to do:

1. In a large bowl, combine the pie filling, cream cheese, confectioners' sugar and vanilla. Mix well.
2. Spoon the mixture into eight ice-pop molds. Freeze until firm, about 1 hour. Makes 8 pops.

* You'll need an adult's help with this recipe.

Puzzling

Unscramble the words below that remind us of math fun.

riaftcon _____

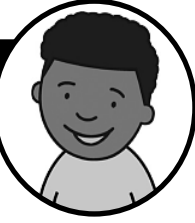

bnremu _____

lehow _____

tmsetiae _____

Answers: fraction, number, whole, estimate.

Mini Jokes

Barry: Who was the king of fractions?
Barbara: Henry the 1/8!

John: Why was the math book so sad?
David: Because it had so many problems!

Eco Note

In a grocery store, find the soda aisle. Count 58 six-packs. Now do the math: How many cans are there? That's how many the average person in the U.S. uses every year! Start recycling aluminum cans at home and at school!

Answer: 348 cans

adapted with permission from "The New 50 Simple Things Kids Can Do to Save the Earth" by The Earthworks Group, Andrews McMeel Publishing (andrewsmcmeel.com)

For Later:

Find math problems at school and at home. Challenge other students or your family to solve the problems.
