Red meat intake, cancer development

Dear Dr. Roach: I have lost two cousins in the past three years who both ate a lot of red/rare meat most of their lives. He got Parkinson's first, and she got cancer and passed away yesterday. I can't help but wonder if their almost-daily consumption of red meat had anything to do with their demise. — J.V.H.

I am sorry to hear about your cousins.

"Cancer" is a large and diverse group of related diseases. The underlying cause is not always clear, and although there often are genetic or behavioral risks, development of cancer has some degree of randomness.

Smoking dramatically increases the risk of many cancers, whereas the effect of red meat is modest. Red meat intake has been shown to increase the risk of colon and lung cancers and, in one recent study, to increase risk

DR. KEITH ROACH TO YOUR GOOD HEALTH

of cancers of the esophagus and lung. The group that had least red meat intake (about five servings per week) had about a 20 percent reduced risk compared with the group eating the highest amount of red meat. This doesn't mean that red meat causes cancer, as those who eat little meat often have other healthy behaviors that may reduce cancer risk.

A 2003 study on Parkinson's disease showed that reducing meat intake improved some function in people with Parkinson's. However, I can't say that meat intake is causal in any way for Parkinson's disease. I can say that overall, less red meat intake is associated with a variety of improved health outcomes, especially vascular disease, but cancer and kidney disease as well.

Dear Dr. Roach: I often read advice by health professionals on the advantage of the Mediterranean-style diet for warding off various ailments. These recommendations seem to imply that the people who live around the Mediterranean Sea, on average, have a longer, healthier life than those people who live in Northern Europe. Are there actual statistics that back this up? — R.

Comparing overall mortality rates of different cultures and using that information to infer relative benefits of eating patterns is fraught with peril. A country-to-country comparison has far too many uncontrolled variables to make reliable conclusions.

The reason I and many other health professionals have recommended a Mediterranean-style diet is that there was a very well-done interventional study randomizing partici-

pants to a diet consisting of high amounts of olive oil, nuts, fresh fruits, vegetables, seafood, legumes, white meat and optional wine. The diet also recommended low amounts of soda, commercial baked goods, spread fats like butter, and red and processed meats. Compared with a control group that was recommended a low-fat diet, participants in the Mediterranean-diet group had a lower rate of the combined endpoint heart attack, stroke or death from cardiovascular causes. A randomized interventional study like this provides strong evidence that the recommended diet is superior to the diet consumed by the control group. It is impossible to tell whether it was some individual component that was responsible for the benefit, or whether it was a combination of what the participants were and weren't eating that provided the observed benefit.

Having the last word

A player came to me in the club lounge, shaking his head.

"My wife and I discuss the deals," he said, "and I always have the last word. It's just that often she doesn't hear it."

He had been today's declarer at 3NT.

"I took the ace of hearts," he told me, "and led a diamond to dummy's nine. East took the ten and returned a heart, and I ducked and won the third heart. Next, I led the ace and a third diamond. When East won and led a spade, I was all snarled up and went down."

"My wife was upset. I tried to defend myself, but she insists I boot the contract."

THIRD HEART

I'll have the last word. It seems South's best play is to win the first heart in dummy, unblock the king of clubs and let the jack of spades ride. West wins to continue hearts, and South takes the ace, cashes the A-Q of clubs and concedes a club.

If West then takes two hearts and leads a diamond, South wins and takes a second spade finesse. He has two spades, two hearts, a diamond and four clubs.

diamond, your partner bids one spade, you raise to two spades and he tries 2NT. What do you say?

ANSWER: Partner has tried for game (he has about 11 points), but you can't accept. Sign off at three diamonds, showing six diamonds, only three spades and minimum values. This sequence shows the advantage of raising spades directly. If you had rebid two diamonds, you would be unsure what to do now.

Sudoku is a number-placing puzzle based on a 9x9 grid with several given numbers. The object is to place the numbers 1 to 9 in the empty squares so that each row, each column and each 3x3 box contains the same number only once. The difficulty level of the Conceptis Sudoku increases from Monday to Sunday.
